

Tikal's OPEN.NET services... its all the edge you need

In today's competitive and stressful business environment, many application developers are struggling to keep up with the growing demand for faster, simpler and more secure delivery of applications from design phase to production. Using same development methodology and tools as before, clearly will not bring you to your finish line on time and on budget.

Tikal Knowledge, the leading provider of Open Source AD&D (Application Development and Deployment) solutions and services gives you the edge you need in order to achieve your goals and development objectives.

For the first time, .Net developers can use open source add-on modules which enable them to shorten the development cycle and reduce its cost by:

- ✓ Using existing code
- ✓ Simplifying development complexity
- ✓ integrating open source modules into your existing commercial platform.

.Net open source, the Edge you need

We offer you a set of tools and methodologies that will enable you to integrate open source software modules into your native .Net environment such as S#arp Architecture, NHibernate, MongoDB, NUnit and more.

For example, S#arp Architecture is a solid architectural foundation for rapidly building maintainable web applications leveraging the ASP.NET MVC framework with NHibernate. The architectural framework allows developers, rather than worry about application "plumbing" they can allot most of their time on adding value for the client by focusing on the business logic and developing a rich user experience.

The following key principals of S#arp Architecture allows developers to avoid time spent on infrastructure details:

- ✓ Focused on Domain Driven Design
- ✓ Loosely coupled Design
- ✓ Pre-configured Infrastructure Design
- ✓ Open Ended Presentation Design

Tikal's Value Proposition

We propose the following services and educational packages which will bring you up to date with adopting these new exiting open source solutions:

- ✓ Customer on-site open source .net 'master' bootcamp
- ✓ Tailored advisory and consultancy services

.NET open edge quick start Workshop

We offer you an on-site .NET open source workshop, which will give you all the knowledge required for using open source tools to develop excellent .NET applications quickly and effectively.

The workshop will include:

- ✓ NHibernate tutorial, covering assimilation of the ORM framework to your product.
- ✓ S#arp Architecture hands on training by Tikal's leading .NET expert.
- ✓ Assessment of your application development needs and where open source tools can fit in
